DECLARATION

I, Mokoena Patronella Maepa, declare that the dissertation hereby submitted to the University of Limpopo for the degree of Masters of Arts in Clinical Psychology has not previously been submitted by me for a degree at this or any other university, that it is my own work, and that all material contained therein has been duly acknowledged.

Signature......................................

Date...........................................
I dedicate this study to three wonderful women in my life: my mother, Modjadji Joyce Maepa; my grandmother, Ngwanalesele Elizabeth Machete, and my cousin, Ngwanalesele Patricia Machete-Ntjie. And, in loving memory of my late father, Pududu Isaac Maepa.
ACKNOWLEDGEMENTS

The study would not have been a success without:

- My Comforter, God the Almighty. You are the Alpha and Omega. I would like to thank you for giving me life.

- I would like to thank my supervisor Professor Ehabour Sunday Idemudia for his guidance, support and motivation. Had it not been for his contribution this study would not have been a success.

- Professor Anneke Meyer, I would like to thank you for helping me make sense out of those seemingly nonsensical numbers and for your constructive criticism, guidance and unconditional support.

- The University of Limpopo Turfloop Campus Department of Psychology staff members made it possible for this study to happen with their different experiences.

- The National Research Foundation provided me with funds which helped make this work a success. Continue making dreams of young bright brains a reality.

- I thank Tshinanne Mudau who served as a field worker in this study.

- The participants (i.e. people living with HIV/AIDS) who took part in this study. Many thanks.

My life without these people would not have been like this:

- My mother, Modjadji Joyce Maepa, you have played a remarkable role in my life. I can sing endless praises for you. I can say endless positive things about you.

- My grandmother, Ngwanalesele Elizabeth Machete, you raised me up in difficult times.
• My cousin, Ngwanalesele Patricia Machete-Ntjie. You are everything to me: actually I do not know whether to call you a cousin, sister, friend, and mother. You mean a lot to me.

• To my brothers Mahlodi James Maepa and Makgwana William Maepa you supported me all the way.

• To my uncle wa lekgowa, Sy Maepa, your being part of my life means a lot to me.

• All my family and extended family members. Even though I did not single you out, you are highly appreciated. You all molded me.

• Kgabo Lawrance Mphela you played a remarkable role in my life. You mean a lot to me and you have touched my life in a remarkable way.

• My best friends Nonhlanhla Arenda Mnisi, Matema Isabella Mashitoa, Madjadji Magdeline Chueu, Lindelwa Mkhwanazi and Dumisang Hlogwane-Phathela. Guys perseverance is the mother of success.

• One other friend, Dr Lefao Matji, your emotional support meant a lot to me.

• All my friends whom I did not single out- I say thank you.

• The M1 class of 2007, guys we were so close to each other and supportive. Nyambeni Matamela and Beauty Mangomeni, you made the university hostel a home away from home.

• The interns group of 2008- what a combination! We have made it guys. Thandi Beatrice Mabasa-Nkuna- what a motivation!

• Mankweng hospital department of psychology staff: Mandu Selepe with your remarkable words of strength and power, and Angy Maphula. You were like mentors to me.

ABSTRACT

Aim: The study aimed at assessing and understanding the unmet needs and well-being among people living with HIV/AIDS. People living with HIV/AIDS experience many challenges. Challenges may be characterized by medical, social and psychological challenges.

Method: A cross-sectional design was used. A total of \(N = 200\) young and adult age ranged from 20-71 years \((\bar{X} = 43.70, \ SD = 12.420)\) women (62%) and 75 men (37, 5%) living with HIV/AIDS who attend HIV/AIDS clinic/unit in Polokwane/Mankweng hospital complex was selected with purposive sample.

Results: Four hypotheses were tested with one-way ANOVA. The findings indicated that social support \((p < .001)\) and age \((p < .04)\) plays a significant role in the psychological well-being of people living with HIV/AIDS. Medical challenges and gender revealed no significant results.

Conclusion: It is concluded that PLWHA attend some form of support groups which will aid in alleviating the psychological distress associated with HIV/AIDS.
